Objective

Final-year Information Science student who ships real, working systems rather than tutorials — equally comfortable architecting a full-stack marketplace or a Document Intelligence Platform using LangGraph from scratch. Seeking a Software Development / AI Engineering internship to bring that same range and ownership to a production team.

Education

Acharya Institute of Technology <i>B.E. in Information Science & Engineering</i>	Bengaluru 2023–2027
Narayana School <i>Class XII (CBSE)</i>	Asansol 2022
Narayana School <i>Class X (CBSE)</i>	Asansol 2020

Technical Skills

Languages: Python, JavaScript, SQL, Java, C++
AI / ML: RAG Pipelines, LangGraph, ChromaDB, Ollama
Backend: FastAPI, REST APIs
Tools: Git, GitHub, VS Code, Vercel, Render
Core CS: DSA, DBMS, Computer Networks

Projects

NearMyColleges — Student Housing Discovery Platform	Live — GitHub
• Built and deployed a full-stack student housing marketplace using React 18, TypeScript, and FastAPI, enabling end-to-end property discovery and management. • Developed a multi-filter REST API with backend role-based access control (RBAC) for secure listing management and search. • Enabled location-based property discovery within a 5 km radius using Leaflet and OpenStreetMap APIs, deploying the platform on Vercel (frontend) and Render (backend).	
Document Intelligence Platform using LangGraph (<i>In Progress</i>)	Python, FastAPI, React, LangGraph, ChromaDB
• Built an agentic RAG pipeline in LangGraph to autonomously route, grade, and rewrite queries for complex multi-step document question answering. • Implemented hybrid retrieval using ChromaDB, BM25, and cross-encoder reranking to improve retrieval precision on ambiguous queries. • Developing an end-to-end platform with a multi-LLM routing gateway (Groq, Gemini, Ollama), hybrid document ingestion, async FastAPI backend, and React frontend.	
CivicSim — AI-Powered Civic Transparency Platform	GitHub
• Developed an automated document verification tool using the Gemini API and FastAPI to parse government contracts and flag potential red flags. • Designed a two-pass anomaly detection workflow combining LLM-based entity extraction with a rule-based evaluation engine. • Built a fund-flow dashboard using React, Recharts, and Firebase, designed for future data.gov.in integration.	

Achievements & Certifications

Hackathons:

- **2nd Place** – Srujana 2025 (200+ teams)
- **3rd Place** – ImpactX 2025, RNSIT

IBM: Cloud Computing Fundamentals – Coursera (2024)
